

REWRITE "THE AI DID IT" WITHOUT THE WORD "IT"

Stack-naming worksheet

Take one AI system near your work and rewrite the sentence "the AI did it" by naming six parts. Wherever a field comes back blank, you have found work, not an oversight.

BRING One AI system you are responsible for, and one thing it recently did

Name the six parts

One row per action the system took. Fill every column with a concrete name, not a brand or a shrug. A blank cell is the first design task.

Action taken	Generator	Tool	Authority boundary	Verifier	Trace	Owner
Action 1						
Action 2						
Action 3						

Notes - where the sentence broke

Write down which fields came back blank, and what each missing name means for trusting this system. A missing name is a design task waiting for an owner.
